

**INFECTION CONTROL,  
WATER EFFICIENCY,  
SAFETY & PERFORMANCE**

**WATERWAYS**

The internals of the tap are specially designed to allow the spout to fully drain when the tap is turned off. The inlet pipes are machined brass and the pressure balancing cartridge limits standing water once the tap is turned off.

**EASY FITTING & SERVICING**

The first-fix base makes fitting the tap easy, and limits down-time when servicing the flow limiters or removing the tap for cleaning.

**FLOW STRAIGHTENERS**

An in-box choice of either fully draining (open outlet) or laminar flow straighteners (for non-draining spout) supplied offers greater flexibility.

**SPOUT INTERNALS**

Removable spout (machined with an angled waterway to facilitate water draining) can be replaced and cleaned to help with infection control. Spout is fitted using a grub screw for security.

**SPECIFYING WITH  
CONFIDENCE**

We aim to help make it as easy as possible to select the right additional products to complete your specification.

## SOLO-NM NON-THERMOSTATIC BASIN MIXER

The SOLO-NM taps from Bristan offer a credible alternative and solution where a thermostatic product is either not required or deemed unnecessary by risk assessment.

Whilst TMV3 rated thermostatic taps offer the ultimate in hot water safety in areas “Where a Scalding Risk is considered significant...” (HSG274 Part 2 guidance), there are other, ‘intermediate risk’ areas such as public spaces, staff-rooms or places where there is little or no risk of users being scalded. In these situations, a pressure balancing tap can give a better degree of thermal protection in the event of cold inlet failure, with less chance of the user being scalded (compared to a standard mixer tap).

The SOLO-NM range from Bristan compliments our other ranges of Healthcare taps to create the complete solution when specifying for Healthcare.

# THE SAFEST HEALTHCARE MIXER TAPS FROM BRISTAN, HERE'S WHY:

## WHY CHOOSE BRISTAN?

Bristan products are made from high grade materials to guarantee they stand the test of time. Our UK engineering team develop products based on research and insights into the needs of our customers ensuring we keep to the very highest of quality standards. We also operate an on-site test facility and all products meet the rigorous standards set by WRAS.
